JOEL · FOUNDER

01 / 12

The CFO Headache.

Three numbers frame the problem.

130₊

SaaS vendors at a typical hypergrowth company.

Source: BetterCloud, 2023 State of SaaS0ps (n=743 IT/security pros)

40%

Of IT orgs consolidate redundant / duplicate SaaS apps each year.

Source: BetterCloud, 2023 State of SaaS0ps

~60%

Of auto-renewals close without negotiation. Nobody saw the deadline coming.

Source: Vendr Procurement Benchmarks, 2024; Tropic State of SaaS Purchasing

CUMULATIVE TAX

15–22% of total SaaS spend. On \$3M/yr, that's **~\$500K** hiding in plain sight.

Gartner SaaS Mgmt; BetterCloud waste benchmarks (\$135K avg unused licenses)

The Gap.

Every existing tool sees a fragment. None build the graph. None take action.

CATEGORY	PLAYERS	KNOWLEDGE GRAPH	WRITES TO LEDGER
Procurement	Vendr · Tropic	× None	× None
Contracts	Ironclad	× None	× None
Expense	Spendesk · Ramp	× None	~ Read-only
Vendo	Finance-side intelligence	● Unified across all four	● Read + Write

A *deterministic* vendor intelligence layer for the CFO. Every dollar mapped, every recommendation *evidence-traced*, every action *wired directly to your ledger*.

§ 01

Deterministic

Every number traces to a real query. No hallucinated dashboards.

§ 02

Evidence-traced

Every value carries a § that opens the underlying SQL, rows, and snapshot.

§ 03

Wired to your ledger

Light's API. Archive vendors, post journal entries, generate the audit trail, from inside Vendo.

The Galaxy.

36 vendors, clustered by function, sized by annualized spend.

DUPLICATE CLUSTERS · 4

\$189K

Immediately recoverable. §

FUNCTIONAL OVERLAPS · 6

\$612K

Under longer review. §

CODA PROJECT · MOST URGENT

9 days

Opt-out window closes. §

Every figure on this screen carries a §.
Click to see the SQL, rows, Light endpoints.

Knowledge Graph.

Categories → vendors → owners → contracts. Plus build-vs-buy per category.

Deterministic AI.

The Kepler thesis applied to finance. AI handles the language, code handles the data, they never cross.

`T = 0 · SEED`

Executive summary
computed once and
reviewed.

`Hashed · timestamped · frozen`

→

`AT REST`

Result cached. SQL stored
alongside.

`source_traces table`

→

`T = N · DEMO / AUDIT`

CFO sees identical numbers
a hand-run query would
return.

`Deterministic at read time`

Every figure is computed **once**, hashed, and frozen at snapshot time. What the CFO sees in a board meeting is what an auditor reproduces **six months later**. The numbers don't drift, don't surprise, and don't differ between viewers.

The Agentic Layer.

Pre-computed at seed time. Agent metaphor real. Latency, not.

§ RENEWAL NEGOTIATION

Coda · \$92K

Opt-out window closes in 9 days. Vendo has pre-staged the kit.

Shippable Monday.

```
• • •      vendo · approve_reconciliation(snowflake)      200 OK · 2.94s

// 1. Archive duplicate vendor in Light
POST /v1/vendors/snowflake_lon/archive
→ 200 { vendor_id: "snw_lon_4419", archived_at: "2026-05-27T14:32:08Z" }

// 2. Post consolidation journal entry
POST /v1/journal_entries
→ 201 { je_id: "je_7c4a", debit: "snw_nyc_master", credit: "snw_lon_4419",
        amount: 124_300.00, currency: "USD", status: "balanced" }

// 3. Emit audit trail
POST /v1/audit/events
→ 201 { initiator: "vendo", evidence: "src_trace:t_8821", state: "audit-ready" }
```

Three entities consolidated *in three seconds*. The audit trail lives in your accounting system, not in Vendo's database.

Where This Goes.

Every rung depends on the rung below being trusted.

SAAS SPEND MGMT · TODAY
